3. Many named communities may have no separate postal code number or no separate town government, yet they appear on maps and bear tree names. This article, then, is an appeal for input from ISA members. You know your state. Which of your towns have names of trees (English or any other language, especially in languages of Indian tribes in your area)? Please send your information to:

F.W. Holmes, 24 Berkshire Terrace, Amherst, Massachusetts 01002. And, if you would like my two lists for your state, send a #10 envelope bearing your name and address, plus $1.00 (for postage and photocopying).

Director, Shade Tree Laboratories
University of Massachusetts
Amherst, Massachusetts 01003

INDICES TO THIRTEEN YEARS OF ISA RESEARCH GRANTS
by Francis W. Holmes

The Memorial Research Trust of the International Society of Arboriculture supports research on tree care with grants. The projects are prioritized by a research committee of the ISA and selected by the trustees of the Memorial Research Trust. A major component in the selection procedure is the usefulness of the obtained data to the arborist. The Trust through 1987 had distributed funds to 132 projects. These cover a wide range of subjects and have been distributed to several states, provinces, institutions and scientists. The four indices that follow will illustrate the scope and distribution.

The number in the index that follows the subject or name refers to the number of the grant. These are listed in your 1987 ISA Yearbook beginning on page 27. Please refer to this yearbook for a more complete understanding of these indices.
